TEST METHOD CONDUCTED

ASTM E662 Smoke Density (Non-Flaming) Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials

	DESCRIPTION OF TEST SAMPLE		
IDENTIFICATION	Colortec Wool 1300 LF		
CONSTRUCTION	Cut Pile		
BACKING	Attached Cushion		

GENERAL PRINCIPLE

This procedure is designed to measure the specific optical density of smoke generated by the test specimen within a closed chamber. Each specimen is exposed to an electrically heated radiant-energy source positioned to provide a constant irradiance level of 2.5 watts/square cm on the specimen surface. Measurements are recorded through a photometric system employing a vertical beam of light and a photo detector positioned to detect the attenuation of light transmittance caused by smoke accumulation within the chamber. The light transmittance measurements are used to calculate specific optical density, a quantitative value which can be factored to estimate the smoke potential of materials. Two burning conditions can be simulated by the test apparatus. The radiant heating in the absence of ignition is referred to as the Non-Flaming Mode. A flaming combustion in the presence of supporting radiation constitutes the Flaming Mode.

CONDITIONS			
PREDRYING OF TEST SAMPLE CONDITIONING OF TEST SAMPLE		d 50% Relative Humidity	
TESTING CONDITION	As Received		
FURNACE VOLTAGE	118 ∨	IRRADIANCE	2.5 watts/sq cm
CHAMBER TEMPERATURE	95° F	CHAMBER PRESSURE	3" H ₂ O
TEST MODE	Non-Flaming		

AVERAGE MAXIMUM DENSITY CORRECTED (Dmc) NON-FLAMING		340	
AVERAGE SPECIFIC OPTICAL DENSITY AT 4.0 MINUTES			118
	Specimen 1	Specimen 2	Specimen 3
Maximum Density (Dm)	356.0	346.0	335.0
Time to Dm (minutes)	17.0	17.5	17.0
Clear Beam (Dc)	5.0	6.0	5.0
Corr. Max Density (Dmc)	351.0	340.0	330.0
Density at 1.5 minutes	52.0	46.0	55.0
Density at 4.0 minutes	117.0	126.0	112.0
Time to 90% Dm (minutes)	12.0	11.5	12.5
Specimen Weight (grams)	14.1	13.8	14.2
